

Problem Statement: Enhancing the Gig Worker Ecosystem

You are the Product Manager Intern responsible for the Workforce Platform. Your goal is to design a product feature or program that reduces gig worker churn and improves overall performance. Your solution should foster a sense of loyalty and provide tangible benefits that differentiate Delhivery from competitors.

Part 1: Problem Analysis

1.1 Persona Definition

Persona: Ravi Kumar (Last-Mile Delivery Partner)

Age: 27

Location: Tier 2 City

Employment Type: Gig worker (flexible hours)

Device Access: Android smartphone with limited data

Education: High school graduate

Language Preference: Hindi (prefers vernacular UI)

Primary Motivations

1. **Earning Flexibility:** Needs to maximize daily income based on available hours and number of deliveries.
2. **Work-Life Balance:** Prefers autonomy in choosing work hours, and values time-off for familial obligations.
3. **Job Security and Benefits:** Seeks transparent payments, timely incentives, and any health coverages/insurance offered.
4. **Ease of Work:** Wants clear, simple app interfaces with minimal complexity to efficiently manage deliveries and earnings.
5. **Respect and Recognition:** Desires fair treatment and occasional rewards or recognition for good performance.

Daily Challenges

1. Unpredictable Earnings and Lack of Clarity in Incentives:
 - Unclear payout structures and lack of real-time earnings visibility.
 - Earnings fluctuate daily due to order availability, cancellations, and delays.
 - Often uncertain about complex incentive structures and bonus payout calculations, leading to distrust and a feeling of being treated unfairly.
2. Inefficient Routing: Faces trouble locating addresses (due to illogical route sequencing, frequent route changes etc.) or accessing locked complexes, affecting timely delivery.
3. Inadequate Support Systems:
 - Difficulty reaching help during on-ground issues such as failed delivery.
 - Difficulty reaching help during in-app issues such as occasional glitches, slow performance, poor UX etc.
4. Operational Inefficiency: Faces delays due to incorrect addresses, locked compounds, customer unavailability etc., wasting valuable time.
5. Fatigue:
 - Pressure to meet delivery time windows and customer satisfaction while managing traffic and weather conditions.
 - Struggles with increased parcel volumes during festivals or sales, leading to longer hours and fatigue.

Key Daily Milestones

Time	Milestone	Platform Interaction
8:00 AM	Login, checks assigned deliveries	Dashboard, Parcel count, Route map
9:00 AM	Begins deliveries	Navigation, OTP verification, Status updates
1:00 PM	Mid-shift break, checks earnings	Incentive tracker, Wallet view
3:00 PM	Handles failed deliveries, escalations	Support chat, Reschedule option
6:00 PM	End of shift, reviews performance	Daily summary, Payout screen, Feedback form

1.2 Churn Analysis: Top Reasons

1. Earnings Uncertainty and Payment Delays:
 - Gig workers often face fluctuating daily earnings due to variable order availability and inconsistent incentives.
 - Unclear incentive structures, delayed payments, or unexpected deductions create trust issues and financial instability, causing churn.
2. Inconsistent Workload & Planning Complexity:
 - Fluctuating demand, especially during non-peak seasons, leads to unpredictable shifts and idle time.
 - Poor manpower planning can result in overstaffing or underutilization, reducing motivation and income.
3. Limited Support & Operational Friction:
 - On-ground challenges like route confusion, failed deliveries, or app glitches often lack timely resolution.
 - If workers feel unsupported during high-pressure situations, trust in the platform erodes, causing churn.
4. Absence of Recognition or Career Progression:
 - No clear path for skill development, performance recognition, or career growth within the ecosystem may lead workers to feel replaceable or in a dead-end role.
 - In such a scenario, workers may view this role as temporary or a stopgap without recognition or health coverage or other benefits, motivating them to seek more secure opportunities, causing churn.

1.3 Opportunity Identification

Delhivery's Unique Advantage/Differentiator:

1. Scale of network: Delhivery operates across 18,700+ pin codes, covering urban, semi-urban, and rural India, with 24 automated sorting hubs and 86 fulfillment centers, enabling scalability and nationwide reach. This scale provides gig workers with consistent work opportunities across diverse geographies, seasons and role types (drivers, loaders, scanners, coordinators), unmatched by competitors.
2. Technologically advanced integrations: Delhivery leverages AI, machine learning, and real-time tracking technology for route optimization, demand forecasting, fraud detection workforce management etc., achieving a 95% first-attempt

delivery success rate and increasing delivery agent productivity by 50% (from 25-26 to 37 shipments per day).

3. Established B2B partnerships: Delhivery already manages relationships, complex contracts, compliance with large enterprises. This makes it easier to establish corporate partnerships for employee benefits (e.g. Star Health, Practo, Bajaj Finserv etc.).

Leveraging this to create a Stickier Platform:

1. Predictable Earnings & Tiered Benefits (counters Financial Instability)
 - Leverage: Use our voluminous data to offer "Priority Access" to high-demand slots and premium deliveries (e.g. high-value items, express shipments) to Pro members.
 - Stickiness Driver: Workers gain more control over their income. Pro members unlock higher pay rates and guaranteed incentive structures.
2. Health, Safety, and Social Benefits Tie-Ups (counters Lack of Recognition and Employee Benefits)
 - Leverage: B2B partnerships to offer benefits such as affordable health insurance, accident coverage, and wellness programs through the gig platform, increasing work engagement.
 - Stickiness Driver: Providing a safety net against personal vulnerability, especially in informal work, signals that Delhivery invests in their people as a whole, not just their labor, creating powerful emotional loyalty and a major competitive moat.
3. Enhanced Support & Community (counters Feeling Disposable)
 - Leverage: Add "Pro Lounges" in Delhivery's physical hubs with priority support kiosks and other basic amenities, creating tangible care points that digital-only competitors cannot match.
 - Stickiness Driver: Builds emotional loyalty by making workers feel valued through instant support for their daily problem-solving, reducing the feeling of isolation that drives churn.
4. Skill-Based Career Pathways (counters Lack of Career Progression)
 - Leverage: Full-stack operations mean Delhivery needs more than just delivery partners (drivers, loaders, scanners, coordinators), unmatched by competitors. For this, "Skill Badges" can be created.
 - Stickiness Driver: A worker can start as a Last-Mile Delivery Partner, earn a "Fragile Handling" badge to handle special shipments, then an "Inventory Scanner" badge to pick up shifts at warehouses, and even a "Hub

Coordinator" badge. Each badge would come with a pay hike and would diversify their work and responsibilities, instilling a sense of professional growth.

Part 2: Solution Design

2.1 Product Vision

Transforming Delhivery's gig workforce into a loyal, high-performing community by building an ecosystem that provides transparent earnings, real-time support, professional growth, and employee benefits - creating a workforce platform that values people as much as performance.

2.2 Feature Brainstorming

1. Earnings360 Dashboard (Tech-based):

- ❖ A real-time, personalized dashboard that displays:
 - Daily earnings
 - Upcoming incentives
 - Progress toward targets for bonuses
 - Alerts for targets/incentive milestones
 - Deductions
 - "Hot slots" for priority deliveries
- ❖ Impact: Reduces financial anxiety, empowers gig workers to plan better to showcase better performance, and builds trust between Delhivery and its gig workers.

2. Skill-Badges (Non Tech-based):

- ❖ Badges unlock access to specialized, higher-paying roles or delivery tiers and are physically recognized on their Delhivery IDs and profiles.
 - "Fragile Handling Expert"
 - "Express Delivery Pro" - eligible for premium shipments
 - "Inventory Scanner" - access to warehouse shifts
 - "Hub Coordinator" - can apply for team lead roles
- ❖ Impact: Creates a path for career progression, incentivising high-performance, whereas multi-role flexibility reduces monotony and thus burnout. Recognition badges create visible identity and status for high-performing gig workers, instilling a sense of pride in the work they put in, which helps build organic loyalty.

3. Pro-Membership (Hybrid):

- ❖ Pro-membership for high-performing gig workers, involving both physical and digital benefits, such as:
 - Priority access to peak-hour deliveries or premium shipments
 - Guaranteed minimum payouts during off-season periods
 - Subsidized insurance, accidental coverage, and other such employee health benefits (leveraging Delhivery's B2B partnerships)
 - Physical "Pro Lounges" at hubs with rest areas and quick-support kiosks
- ❖ Impact: Priority work access keeps the gig workers engaged, minimum wages ensure they continue being invested in their growth around the year, both leading to high-performance. Employee benefits and support touchpoints at hubs counters the feeling of being disposable - thereby building long-term loyalty.

2.3 Feature Prioritization

Framework used: **ICE**

I - Impact (scale of benefit)

C - Confidence (certainty of predicted impact)

E - Ease (of effort to go live)

Feature	Impact	Confidence	Ease	ICE Score (I * C * E)
Earnings360 Dashboard	9 Directly tackles the #1 driver of churn (financial instability). Builds foundational trust.	9 High confidence based on direct user pain points. Easy to validate with user interviews.	8 Leverages existing data, does require UI/UX work but no new core logistics.	648
Pro-Membership	8 High impact on loyalty, but benefits are unlocked after high-performance only.	7 Confidence is medium - B2B partnership complexities and cost structure need validation.	4 High coordination across Ops, Finance, Partnerships. Creating physical lounges would be complex.	224
Skill-Badges	7 Strong on long-term retention but doesn't solve the immediate, major pain of unpredictable pay.	6 Need to validate gig workers' inclination towards upskilling and system readiness for specialized tiers.	5 Requires assessment systems and operational changes to create new role tiers.	210

The highest priority feature, by following the ICE framework, is the **Earnings360 Dashboard**.

2.4 User Flow

Part 3: Implementation & Measurement

3.1 Pilot Plan

Target Segment: Experienced Gig Workers in Tier 2 Cities

Filters:

- Minimum 3 months employee vintage (>90 days)
- Active in last 2 weeks (confirmed engagement)
- Tier 2 City (Bhopal, Nagpur, Meerut etc.)

Why?

1. Experienced workers already understand the delivery flow and are more likely to engage with advanced features like earnings tracking and incentive alerts.
2. These workers often face greater earnings unpredictability due to fluctuating demand and limited support infrastructure, making them the ideal cohort for testing the dashboard's impact.
3. By targeting non-metro regions first, we address segments with operational variability, uncovering edge cases and making platform improvements before a Tier 1 rollout.

Timeline of Pilot

Timeline	Stage	Activities
Week 1-2	Setup	Finalize dashboard UI, integrate backend data, onboard pilot users
Week 3-4	Soft Launch	Release to 200-300 workers, monitor usage, collect feedback via in-app surveys
Week 5-6	Iteration	Refine UI/UX and incentive logic based on feedback, fix bugs
Week 7	Evaluation	Analyze impact on shift selection, delivery volume, and incentive attainment

3.2 Success Metrics

North-Star Metric:

Incentive Attainment Rate - % of gig workers who reach their weekly incentive targets.

Why? It meets all requirements that the solution had to address as part of the problem statement;

- (i) Directly reflects improved **performance**
- (ii) Showcases enhanced engagement (reduction in **churn** is strongly correlated with higher engagement levels)
- (iii) Provides clarity around earnings (Tangible **benefits**)

Supporting Metrics:

1. Dashboard Engagement Rate: % workers who actively use the dashboard (daily/weekly logins, feature interactions). Increase in this metric would validate usability of this feature and relevance w.r.t company's goals.

2. Earnings Volatility: To assess decrease in standard deviation in daily earnings of workers. Since the dashboard aims to create predictability, a successful solution will help workers stabilize their income, which is a key driver in reducing churn.

3. Shift Uptake Rate: % increase in shifts accepted per worker per week. Indicates proactive planning and engagement with "hot-slot" alerts.

4. Delivery Volume per Shift: To assess increase in average number of successful deliveries per shift. Reflects operational efficiency and motivation to maximize earnings.

Measuring Success - Key Activities

★ **Quantitative Analysis** - Track changes in:

- Incentive Attainment Rate
- Dashboard Engagement Rate
- Earnings Volatility
- Shift Uptake Rate
- Delivery Volume per Shift

★ **Qualitative Analysis:** Conduct in-app surveys and short interviews to understand perceived clarity in earnings, motivation, and trust towards the organization.

★ **Behaviour Signals:**

- Observe if workers begin tracking their progress earlier in the week.
- Look for increased frequency of shift selection during "hot-slots."

Data for Up-Scaling: Compared w.r.t engagement with the old UI, before dashboard introduction -

- $\geq 15\%$ increase in Incentive Attainment Rate compared to baseline
- $\geq 25\%$ dashboard engagement (daily active users)
- $\geq 20\%$ reduction in earnings volatility (standard deviation)
- $\geq 10\%$ uplift in shift uptake or delivery volume
- Feedback indicating improved trust and planning behavior
- Operational readiness for rollout (e.g., 0 backend glitches, support team alignment)

3.3 Final Pitch

Delhivery's gig workforce remains one of our greatest strengths, and herein lies a big challenge. Today's workers see high churn, earning unpredictability, and opaque incentives create uncertainty that undermines worker loyalty, engagement, and ultimately our operational efficiency.

To transform this, I propose the **Earnings360 Dashboard** - a real-time, personalized earnings and incentives tracker integrated into the Delhivery Partner app. This dashboard will provide gig workers with transparent visibility into their daily earnings, incentive milestones, progress towards bonus targets, deductions, and priority "hot slots" for priority deliveries. By empowering workers with actionable insights and financial predictability, we address the root causes of churn and disengagement.

The **business value** is undeniable. By transforming worker anxiety into trust, we directly attack our biggest cost, i.e., attrition. We will see:

- Reduced Churn, lowering cost of recruitment and training
- Higher Performance, with a more motivated workforce achieving more deliveries per shift
- Improved Planning, as better shift uptake will stabilize our operations

We will prove this by tracking a direct leading indicator: a $\geq 15\%$ increase in our Incentive Attainment Rate, supported by a $\geq 25\%$ dashboard engagement rate and a $\geq 10\%$ uplift in shift uptake or delivery volume. By focusing on transparency and empowerment, the Earnings360 Dashboard will create a stickier, more loyal workforce driving consistent performance and operational excellence. This innovative solution isn't a cost, rather it's an investment in operational excellence and a durable competitive moat built on a loyal, high-performing workforce.

I seek your support to pilot and refine this critical platform evolution that directly fuels our mission to win in India's evolving logistics landscape.

Thank You.
